- **Penetrating injuries** occur when an object penetrates the eye. These injuries can be caused by sharp objects, such as knives, scissors, or glass.
- **Non-penetrating injuries** occur when an object does not penetrate the eye. These injuries can be caused by blunt objects, such as fists or baseballs.

The symptoms of an eye injury will vary depending on the type of injury. However, some common symptoms include:

- Pain
- Redness
- Swelling
- Blurred vision
- Double vision
- Light sensitivity

The diagnosis of an eye injury is based on a physical examination and a medical history. Your doctor will ask you about your symptoms and how the injury occurred. They will also examine your eye using a variety of instruments, such as a slit lamp and an ophthalmoscope.

In some cases, your doctor may need to Free Download additional tests, such as an X-ray or a CT scan, to get a better view of the injury.

The treatment of an eye injury will depend on the type of injury. However, some common treatments include:

- **Antibiotics** to prevent infection
- **Pain medication** to relieve pain
- **Eye drops** to reduce inflammation
- **Surgery** to repair the eye

There are a number of things you can do to prevent eye injuries, including:

- Wearing protective eyewear when playing sports or working with hazardous materials
- Keeping sharp objects out of reach of children
- Avoiding contact with chemicals and other irritants
- Getting regular eye exams

Eye injuries are a common occurrence, but they can be prevented and treated. By following the tips in this guide, you can help keep your eyes healthy and safe.
